Company presentation

Complete multisensory rooms for your institution.

Planning, specialized equipment, installation and professional training, based on the Snoezelen approach, all in a single project.

Online interactive version: **mundodossentidos.beforge.studio/en/mds-presentation**

Who we are

Technical expertise for new ways of sensing.

We are a company specializing in multisensory solutions for municipalities, schools and institutions. Every project starts with the people who will be served and the goals of those who care for them.

Specialized planning

Functional environments, with equipment chosen for each need.

Integrated solutions

Design, equipment, installation and automation in a single proposal.

Training and follow-up

Prepared teams and technical and educational support after implementation.

Multisensory room

An environment designed to stimulate the senses with purpose.

Lights, sounds, textures, movement and technology used individually or in combination, with controlled stimuli that respect each person's characteristics.

01

Exploration

Resources that invite touching, moving and experimenting.

02

Perception

Colors, sounds and textures adjusted to each activity.

03

Comfort

A calm, safe and comfortable space.

04

Discovery

New ways of interacting with the environment.

Snoezelen methodology

A recognized approach, applied under license in Brazil.

Developed in the Netherlands, the Snoezelen approach uses prepared environments and controlled stimuli to provide experiences of perception, exploration, interaction and relaxation.

Snoezelen license

Mundo dos Sentidos is licensed to work with the Snoezelen approach in Brazil.

Certified training

Theoretical and practical training for education and health professionals.

Who we design for

Solutions adapted to the reality of each institution.

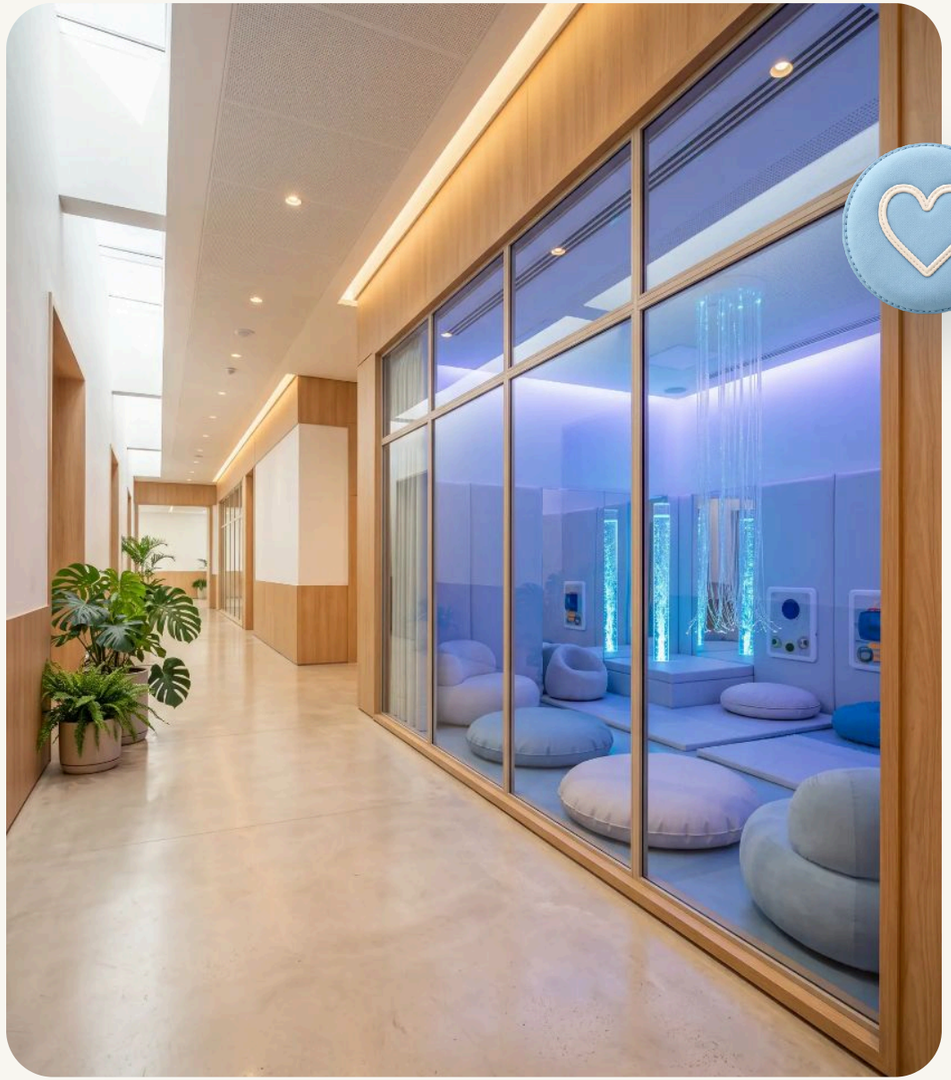

01 **Municipalities and public agencies**
Rooms that expand service capacity in education, support and follow-up.

02 **Schools and specialized institutions**
Resources that complement educational activities and sensory stimulation.

03 **Clinics and health institutions**
Stimuli integrated into the therapeutic practices led by professionals.

04 **Malls, airports and public spaces**
Calming spaces with controlled stimuli in high-traffic locations.

> For children, teenagers, adults and older adults, with stimuli adjusted to each person.

Our solutions

Everything your institution needs, in one place.

01

Multisensory rooms

Complete, customized project: planning, equipment, installation and training.

View on website →

02

Sensory equipment

Standalone resources to create, complement or expand existing environments.

View on website →

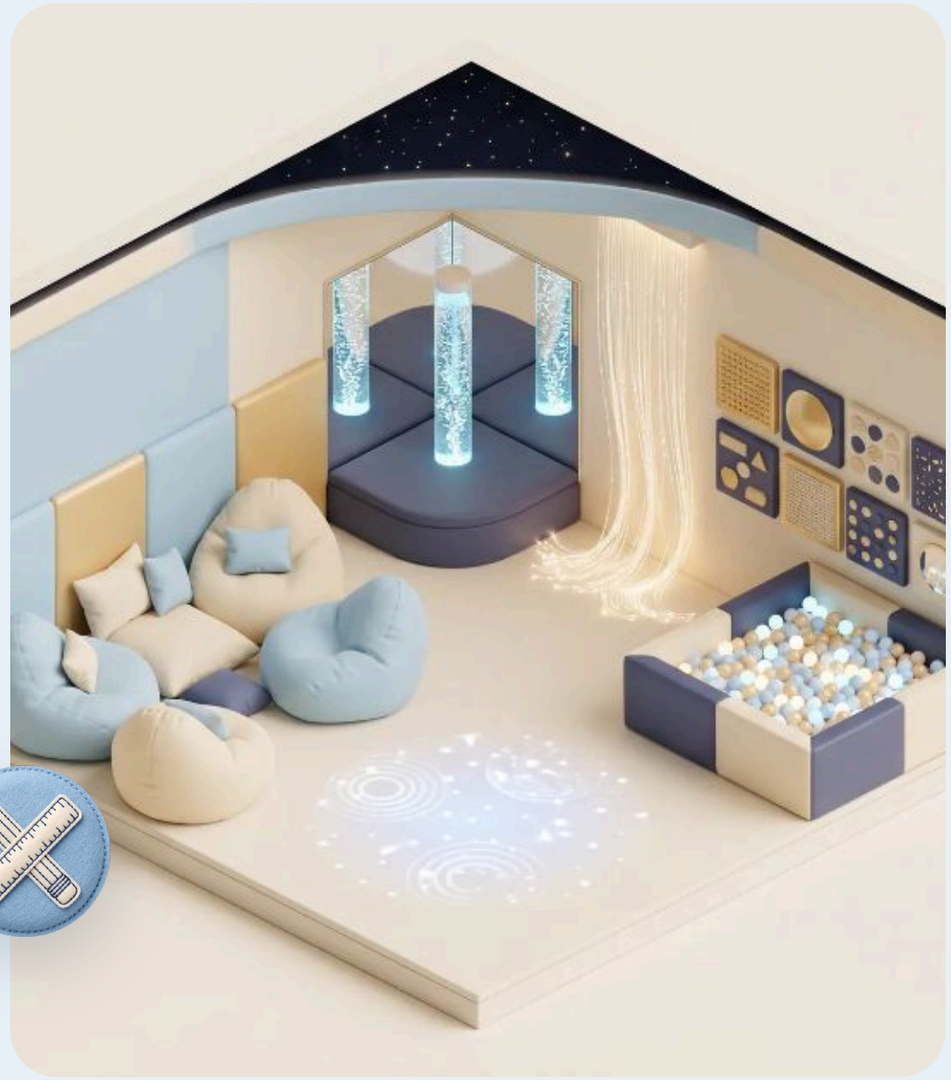

03

Courses and training

Theoretical and practical Snoezelen training for teachers, therapists and teams.

Complete solution

From planning to support, an integrated project.

01 **Environment planning**

Analysis of the space and goals to define equipment layout and infrastructure, with a 3D design according to the proposal.

02 **Specialized equipment**

Resources chosen for the people served and the experiences desired, with no one-size-fits-all configurations.

03 **Installation and setup**

Installation of the components and setup of the planned lighting, control and automation.

04 **Professional training**

Operational training and theoretical and practical instruction in the Snoezelen approach for the team.

05 **Specialized support**

Technical and educational support and maintenance, according to the conditions of each contract.

Multisensory resources

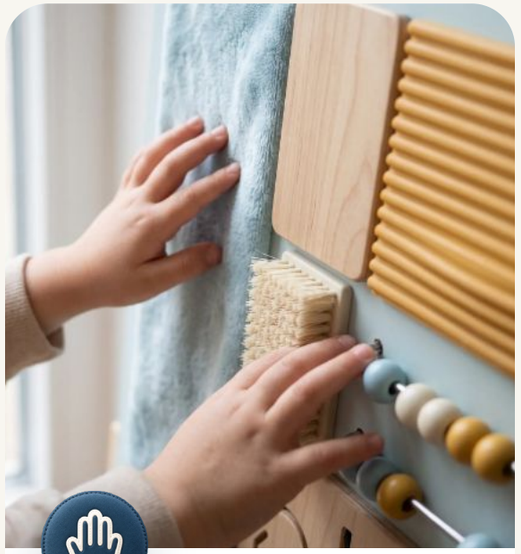

Different stimuli, endless possibilities.

The combination of resources is defined during planning, according to each institution's goals and the profile of the people served.

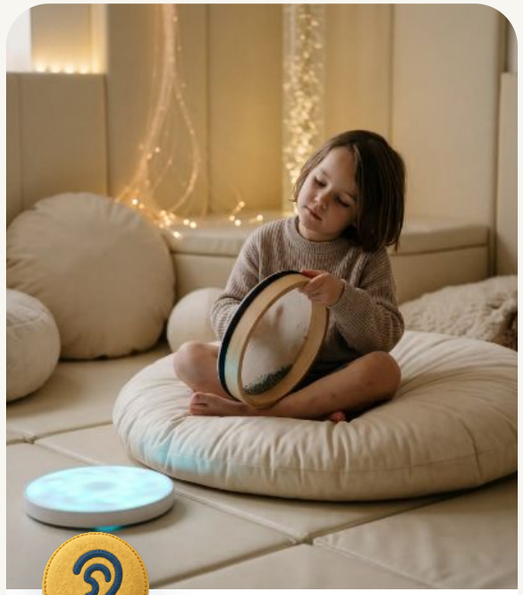

Visual stimulation

Bubble tubes, fiber optics, projections and controlled lighting.

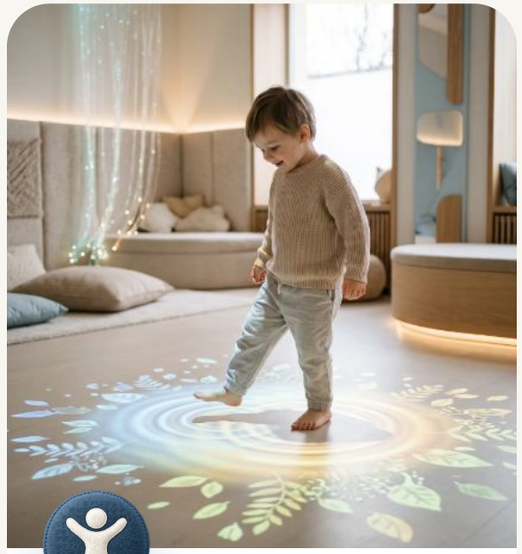

Tactile and body stimulation

Sensory panels, textured mats and contact resources.

Auditory stimulation

Sounds, rhythms and instruments integrated with the visual stimuli.

Interaction and movement

Interactive floors and equipment that respond to touch and movement.

Sensory equipment

Meet some of our equipment.

We also supply standalone equipment to complement existing rooms, with guidance on choosing.

Bubble Tube

A tube with water, moving bubbles and colored lighting, with effects that can be controlled.

Fiber Optics

Flexible strands of light to watch and touch, with changes in color and intensity.

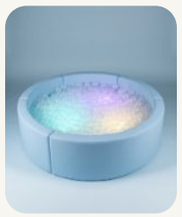

Starry Sky

Points of light that recreate a starry sky and create an atmosphere of contemplation.

Infinity Mirror

Reflective surfaces and colored lights that create the illusion of depth.

LED Ball Pool

A padded enclosure with balls and colored lighting: tactile and visual stimulation in a single resource.

Sensory Mat

Different textures to explore with hands and feet.

Talking Cube

When the cube is rotated, the color of the connected equipment changes: every action gets a response.

Color Panel

Colorful buttons that trigger the room's lighting effects.

Interactive Floor

Projections and sensors that respond to movement with games and effects.

Interactive Display

Touchscreen with activities for perception, interaction and coordination.

LED Cloud

A luminous ceiling structure that shapes the room with changing colors.

Ocean Drum

An instrument that reproduces the sound of ocean waves, for auditory exploration activities.

How it works

From your need to a room ready to use.

01

We learn your needs

An initial conversation to understand the room's purpose, the profile of its users and their goals.

02

We assess the space

Analysis of the space's dimensions, installation possibilities and infrastructure.

03

We develop the proposal

Equipment selection and a customized technical and commercial proposal, based on your budget.

04

We handle the implementation

After contracting, supply, installation and setup of the resources.

05

We prepare the team

Contracted training sessions, with the option of follow-up support.

You don't need to have the space ready: our team guides the assessment of the environment from the very first contact.

Courses and training

Teams prepared to use every resource.

42	10	2	✓
hours of content	modules	in-person days	certification

Snoezelen Expert V2.0

Complete training, from fundamentals to applications, with a final assessment and certificate.

2-Day In-Person Course

In-depth study of the methodology and practices of Mundo dos Sentidos, with certification. One of our most popular formats.

Institutional training

Two-day in-person immersion at the institution's own site, with hands-on practice using the equipment.

Our own system and app

Technology to follow each child's development.

01 **Management and monitoring**

Organized information and development tracking, with special attention to children with autism.

02 **Each child's progress**

Professionals record each child's progress in continuous follow-up that goes beyond the initial training.

03 **Integration between institutions**

Integration with public, private and government databases and with schools and daycare centers. With authorization, monitoring can be done in real time.

04 **Support and communication**

A direct line to our team for guidance, questions and information about products and services.

Institutional experience

From specific equipment to the complete room.

Our experience includes projects and supply contracts for public institutions, such as the supply of sensory resources for the municipality of Guaratuba, in Paraná.

01

Complete Snoezelen rooms

Planning, equipment, automation, installation and training in a single proposal.

02

Installation and automation

Lighting, control and automation systems configured for each project.

03

Supply of resources

Specific equipment to expand or complement existing environments.

Next steps

Shall we develop your institution's project?

Tell our team about the available space, the people you want to serve and your institution's goals. From there, we put together a customized proposal.
